

The science of dermatology in India has evolved over the last 20 years from a specialty practice to a mainstream commercial practice with over 10,000 practitioners throughout the country. India therefore is an ideal location for conducting clinical research in dermatology. Most prevalent skin diseases include pediculosis, tinea, vitiligo, pityriasis versicolor, pityriasis, alba, dermatitis, urticaria, impetigo, scabies and boils.

Fungal infections of the skin are seen in 28% patients with a higher prevalence among males. Tinea corporis accounts for 78% of the superficial fungal infections. The prevalence of pediculosis among school children varies from 17% in one study, to 56% in another. Eczema and skin allergies account for nearly 30% of the cases as accounted by pediatric dermatologists in India. Acne has affected nearly 51% of boys and 38% of girls in the age group 12-17 years.

In 2013, about 35% of the young girls in India were confirmed polycystic ovary disease (PCOD) cases. Now dermatologists know that each PCOD case has its own hormonal disturbance, and requires special treatment.

Our Sites and Investigators

Our access to the most prominent dermatology sites and investigators ensures a large and diverse patient pool along with the most up-to-date lines of medical treatment. We ensure that clinical trials are conducted according to ICH-GCP guidelines meet the highest standards of ethics and integrity.

CITIES	SITES	INVESTIGATORS
Bangalore	8	12
Chennai	5	7
