

HIV / Infectious Disease

Globally, India has the third highest number of people living with HIV. In 2013, the estimated prevalence of HIV in India was 0.3% and there was an estimate of 130,000 AIDS-related deaths.

Between 2005 and 2013, the number of new HIV infections had declined by 19%, however, India still accounted for 38% of all new HIV infections in Asia. In 2013, more than 700,000 people in India were on antiretroviral therapy. This makes it the second highest number of people on HIV treatment in any single country next only to South Africa.

India accounted for 51% of all the AIDS-related deaths in Asia in 2013, which is more than three times the percentage for China. HIV spending is the third ranking specialty spending across oncology, autoimmune, I.D. and CNS, at \$14.8B.

Tuberculosis. Every fifth new tuberculosis case in the world lives in the Indian subcontinent. It is estimated 40% of the population carries a form of the strain. A WHO report indicates India has the highest number of TB resistant strains in the world with India being the country harboring the highest number of TB cases in 2014, followed by Indonesia and China. Viral hepatitis. There are over 500 million people living with chronic hepatitis in the country, with viral hepatitis claims 250,00 lives in India every year.

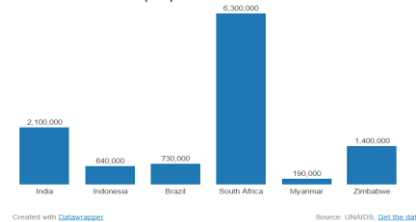

Our Sites and Investigators

Our access to the most prominent HIV / I.D. sites and investigators ensures a large and diverse patient pool along with the most up-to-date lines of medical treatment. We ensure that clinical trials are conducted according to ICH-GCP guidelines meet the highest standards of ethics and integrity.

HIV Ranks 3rd in Specialty Spending

No. of HIV-infected people in 2013

CITIES	SITES	INVESTIGATORS
