

With its large and growing population, India has developed significant prevalence of neurological and psychiatric diseases and disorders. Statistics show that in India there are more than 10 million cases of neuropsychiatric conditions currently being treated. Second, the rising rates of dementia, TBI and stroke will potentially add over 3.5 million people to the disabled population, annually

The condition with the greatest prevalence in India is Epilepsy. In addition there are approximately 10 million cases of other neuropsychiatric conditions including Stroke, TIA, Parkinson's Disease, Vascular Dementia, Alzheimer's Dementia, Migraine, Epilepsy, Cluster Headache, Neuropathies - Diabetic & Non diabetic, Brain tumors, Multiple Sclerosis, Meningitis, MDD, and Schizophrenia.

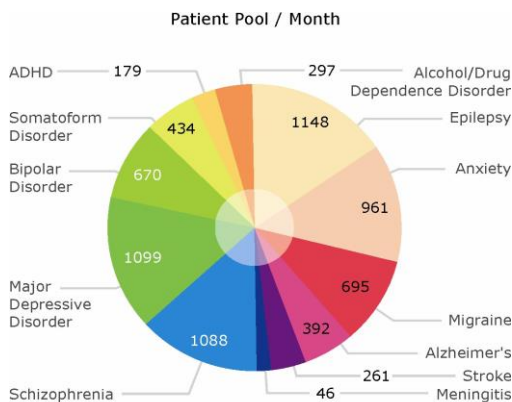

Dementia. The second contributor to the emerging epidemic is dementia. The Indian population is aging rapidly, with the proportion of older adults in India predicted to increase from 76 million to 301 million by 2051. Traumatic Brain Injury (TBI). It is estimated that 1 million persons are disabled due to TBI annually. Stroke. With incidence doubled, the incidence rate of stroke in India is currently estimated to be 145 per 100,000 people.
